- ☐ The longer days and warmer soil will be encouraging all things to grow, including weeds! Keep both your hoe, kneeler pad and fork handy.
- ☐ Pinching the growing tips from your bedding plants will encourage more flowers and a bushier plant.
- ☐ Summer hanging baskets can now be placed in position. In warm weather they will quickly dry out so don't forget them during your watering regime.
- ☐ Nothing smartens up a garden more quickly than a neatly mown lawn. Mow at least once a week and keep the edges well-trimmed.
- ☐ Containers that have been hardened off can be moved to their flowering position. Place any scented ones near doors and open windows.
- ☐ If you haven't done so already then put plant supports and stakes in place for your taller perennials. Once they start to flop it will be too late!
- ☐ As your tomato plants start setting fruit, feed them with a high potash feed every 10 to 14 days.
- ☐ If June lives up to its reputation and becomes a scorcher then you will need water, water and then water again. With some feeding in between!
- ☐ Evergreens can be given a trim now. If you feel artistic then June is the perfect month to try some topiary. Doesn't every garden need a dragon?
- ☐ At last you can remove the yellowed foliage from daffodils and other spring flowering bulbs. Mark where they are so that you don't dig them up when looking to plant something new.
