**Height/Spread:** H 150-200cm, S 40-50cm

**Aftercare:** Moderate

**Sow/Plant:** Sow Late Feb-April, Plant Late May-June

**Harvest/Flower:** Late July-Oct

## Additional Information:

### Description:

The first blight resistant cherry sized tomato, perfect to grow outside in the UK. Resistant to both early and late blight and good resistance to Fusarium and Verticillium. Great flavour with a good sweetness (9 Brix) and a satisfying 'tang' which makes you want more. Plants will keep cropping until the first frosts outside and longer if grown in a greenhouse or tunnel Cordon.

### Growing Information

Growing your Crimson Cherry from seed

Tomatoes are extremely popular to grow from seed. Tomato seeds should be planted from late February - April for greenhouse growing or April for outdoors. Sow in pots or in a propagator on a windowsill at approximately 18-21C (65-70F) using a good quality moist compost. Germination will occur within 7 - 14 days. Once your seedlings are large enough to handle transport into individual pots, spaced apart. Cordon variety - One stem grown by pinching off side-shoots as they appear, needs staking and tying in. Will perform best in a sunny spot or greenhouse.

### Hints

Plants will require side shoots to be removed and the plant will need to be tied onto a support, such as a cane.

### Wondering which tomatoes to grow?

Growing your own tomatoes is a great place to start, they are simple to grow and a few tomato plants can reward you with a plentiful supply of delicious fruits. Tomatoes come in all shapes and sizes; the vast choice of tomatoes available means you are spoilt for choice!
