Hardiness: 5°C to 0°C

Height/Spread: H 150-200cm/S 40-50cm

Aftercare: Moderate

Sow/Plant: Sow mid-April to Mid-June, Plant June

Harvest: Aug-Oct

Additional Information:

Description:

Dual Use Corn: Stir-fry or popping

Perfect to use as tender, sweet baby corn in stir-fry or Thai curries. Leave the cobs on the plants to grow to maturity (approx. 20cm), then harvest and let dry to create corn for 'popping'. Each plant will produce 4-5 cobs. Place dried cobs in a plastic bag in the microwave and the corn will literally pop off the cob!

Growing Information:

Growing your Snobaby sweet corn from seed

Sow in a propagator on a windowsill or one seed per 5cm (2") pot in a greenhouse at approx 18-21 degrees c using a good quality compost. Cover the seeds with around 2cm compost. Grow on and plant out when all danger of frost has passed around 38cm (15") between plants each way in a block. Can also be sown directly into the garden when the soil is warm. Pick miniature cobs regularly before pollination to promote further mini cob production or leave them to swell if you want cobs for popping

Hints:

To dry the cobs, leave them on a sunny windowsill until the kernels go hard.
